

## FormFox Release 2024.8: **October 14, 2024**

### ENHANCEMENTS

- **New! FormFox Login Page Update:** The FormFox.com login page has a new look. It includes an easy-to-use layout, updated information, a larger button for patient health history, and updated contact information.
- **New! Changes to the Complete / Search Page & Grid:** We have made significant changes to the Complete / Search event grids in FormFox. You can now customize the columns that appear in the grid so you can have quick access to the information that is most important to you.
- **Add Account Validation to CRL Orders:** Formfox will now check to see if CRL account numbers are valid and if the panel ordered is valid for the account number used.
- **OHS Event Capture - Back X-ray 2 Views:** Formfox now has an OHS event capture for Back X-ray 2 view.
- **OHS Event Capture - Influenza Vaccination:** Formfox now has an OHS event capture for flu vaccines.
- **Add Remarks Section to the PEth Workflow:** When using the PEth blood draw workflow, if a collector clicks “unable to draw” they can leave remarks explaining why the draw was unsuccessful.

### BUG FIXES

- **Marketplace Authorization Form - Time Zone Text:** The Marketplace displayed EDT Eastern Standard Time rather than Eastern Daylight Time. This has been corrected.
- **Change to FAA DOT Donor Information Requirements:** When a DOT collection is performed with FAA as the testing authority, the donor email is no longer a required field.

### API CHANGES

- **Changes to Locksite Functionality for MP Events:** This change adds functionality for Marketplace ordering parties. When a Marketplace order is sent with the locksite flag “Y”, the services can only be performed at the specified site. If the locksite flag is set to “N”, the order can only be fulfilled at a site that can perform all the services in the order. **No code changes are necessary for API users.**
