

FormFox Release 2024.7: September 5, 2024

ENHANCEMENTS

- **FormFox API – Create/UpdateOrder Response:** For our API client, CreateOrder and UpdateOrder responses should use the Test_Detail.DetailAN as the Service IdValue in the response that is passed back to the client for a successful order. This only impacts FormFox order service V2 and requires no code changes on the customer's part.
- **Updates To State Drop-Down List:** In the donor information for Formfox events, American Samoa and Guam now will appear on the drop-down list of State of Issue for driver's license.
- **Extended Number of Days for Site Deactivation:** FormFox deactivates sites in the network if they have not performed any FormFox events in 75 days. This time is being extended to 180 days. If a clinic is at risk of being deactivated, associated users will receive a series of email notifications about the pending deactivation. Clinics that have been deactivated, but wish to be reactivated, can call support.

BUG FIXES

- **FFPPE Missing Result Report Button:** The FormFox Non-DOT Pre-Placement Exam (FFPPE) was missing the button to generate the Results Report. This issue has been corrected.
- **Added Delete Button on DOT Physical Test Detail:** FormFox Administrator level users, AdminNoUser, and Super users have now have the ability to delete DOT Physicals if necessary. This restores previous functionality.
