

## FormFox Release 2024.2: February 22<sup>nd</sup>, 2024

### ENHANCEMENTS

- **Automatically Inactivate Collection Sites After Prolonged Inactivity:** Collection sites that go for 75 days without performing any services in FormFox will be deactivated. Clinics will receive three courtesy emails regarding their inactivity, and if deactivated sites can be reactivated by contacting our support team.
- **Changes to the FormFox PPE Documentation:** An important change is being made to the documentation to the FormFox Pre-placement exam. There will now be a short report in addition to the full-length report. Both can be accessed from the test events detail page.
- **Changes to the DOT TOR Process:** In DOT urine collections, collectors can perform additional collections in an attempt to collect a specimen that is within the acceptable temp range.
- **FLEX- Adding Panel Names:** In the FLEX workflow when selecting a test to be performed, users will now see both the panel number and panel name in the drop down menu.
- **Date of Birth Validation:** Validation has been added to the DOB field in FormFox to avoid problems with users accidentally typing in years that are incorrect. Example: 1850

### BUG FIXES

- **Autofill for Quest Collections:** Passwords and other information will no longer autofill when users are starting a Quest collection.
- **Default API FormFox Orders:** FormFox will now populate more accurate information regarding the source of orders on the test details page and will no longer default to FORMFOX ORDER for API Orders
