RLSE0011085 Workforce 2.20 Release
Release Notes
February 27th, 2024

WF Results Tab

Results Grid populates the username for the User that updated the order in the "Updated By" column when an order is updated.

WF Order Tab

Order expiration format has been updated from hours to date/time format.

"Allow Override" button on order screen has been updated to "Extend Expiration by 24 Hours". If this box is checked, and an expiration date has been entered for the order, the expiration date will be extended by 24 hours, and the same (extended) expiration date will be printed on the Authorization form. In our next release, a fix will be implemented so that this button will extend the expiration by 24 hours beyond the originally entered expiration date, but the originally entered date will populate on the Authorization form as opposed to the extended date.

WF Reports Tab

All results (including Archived results), populate on the Summary Report.

New "Unmerged Random Results" report added to Reports tab. Report reflects ALL results within that date range for which the report was run that A) are DOT B) Reason for Test is Random C) There is no order associated with the result.

WF Randomization Tab

New buttons added to the Consortium and Random pool pages within Portal Admin called 1) Run All Active Pools 2) Run Selected Active Pools to allow users to run Randoms from master portal for all or selected active pools.

Random Pool Program Intervals can be closed as needed during the current year.

When an alternate is chosen and the test record is created for the Selection Inbox, the lab account is consistently populated on the test record.

WF Administration and My Information Tabs

"Marketplace Only" checkbox in Clinic Search Options reflects Clinic Search Options settings from Portal Admin. These settings can only be edited by Portal Admin.

New "Manager" role created for managers to keep their identity and events hidden from all users aside from Portal Admins.

Users can move a scheduled but uncollected random back to a status of pending.
